

Instrument Cleaning Care

FLUTE

Daily

- Remove water from inside the flute body and headjoint with a cleaning rod and appropriate cloth attached to it. Make sure to fold cloth over top of cleaning rod so that no part of the metal is exposed to the instrument.

Weekly

- Gently remove fingerprints from the keys and body with a silver polish cloth. NEVER use a liquid or cream/paste silver spray polish as it will damage the pads and key bearings.
- Clean all tenons and sockets with a clean soft cloth.
- Vacuum case to get rid of all debris.

Yearly

- Bring your instrument to a qualified repair technician for a professional regulation & lubrication and to replace needed pads.

Cleaning Supplies Needed

- Flute Rod Cloth, Flute Cleaning Rod, Soft Cloth, Polish Cloth
